Adding Intelligence to Video

TECHNICAL BULLETIN

Date: 10/24/02

Technical Bulletin TB_102402

Subject: Map a Common Drive for all Network Client Workstations.

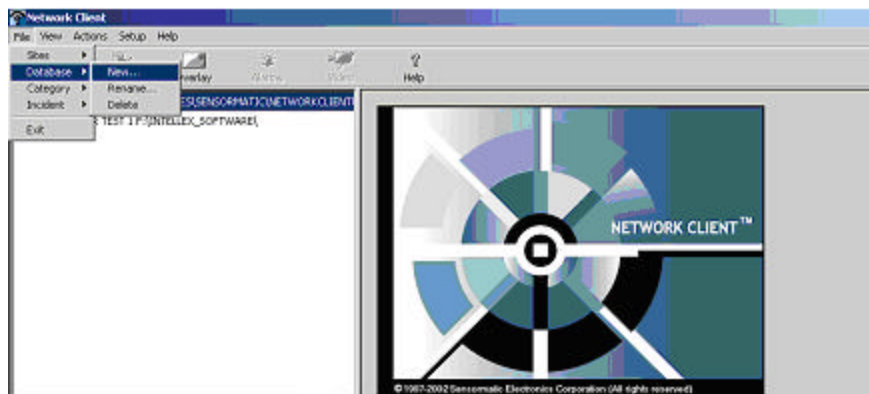

Purpose: This bulletin provides instructions for creating a central database for incident download, storage and retrieval on multiple Network Client workstations.

Issue: Customers with multiple Network Clients need to share downloaded video clips.

Solution: Create a shared directory following the instructions below.

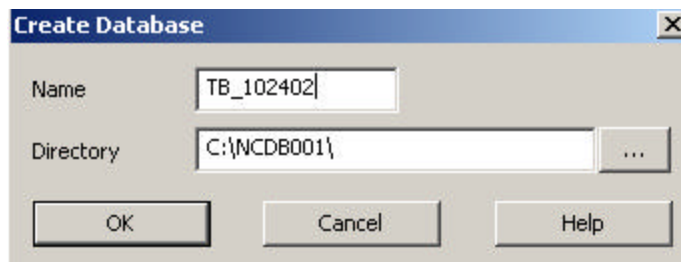

Instructions: Map a common drive to all the Network Client workstations.

1. Open the Network Client program.
2. Select **Database** on the bottom left hand corner of the program
3. Select **File, Database and New** as shown below.

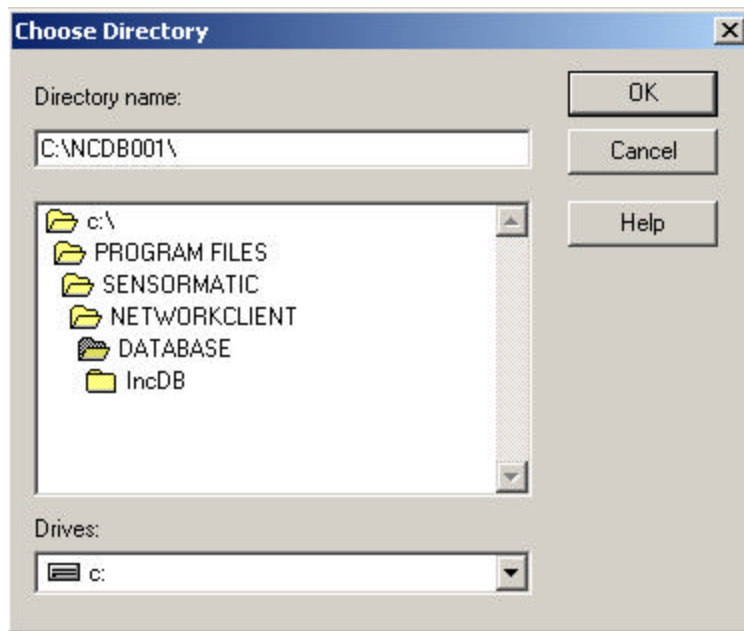

4. Create Database pop up menu appears. Give the new Database a **Name**. For the example below, the database name is TB_102402.

5. On the right of **Directory** select the ampersand button, .

6. Select the drive path to the Network Client DATABASE that all the Network Client workstations are mapped to. For this example, the default drive C is selected.

Note: If a directory selected does not exist, select **Yes** on the Choose Directory pop up menu.

7. Select **OK** to approve the database path. You will now see the new database that you named. From a central database you can now download, store and retrieve video with individual Network Client workstations.
